Health in Ogden: Overview

Dear Community Members & Stakeholders of Ogden,

We are pleased to share the Iowa Community Health Snapshot series, a set of reports designed in partnership with Iowa State University's Community Economic Development to assess the overall landscape of health and well-being across Iowa. The following pages include the health snapshot for your community. The snapshot can be used to see how Ogden ranks across various health measures compared to the rest of the state and similarly-sized communities. This comparison allows us to identify Ogden's strengths and opportunities for growth by leveraging the Centers for Disease Control and Prevention PLACES dataset.

The report includes 37 health measures organized topically by general health status, risky behavior, health outcomes, prevention, and disability. We provide a general overview of each health topic, followed by a description of each health measure. Health measure descriptions include crude and age-adjusted rates and a ranking that tells you how your community ranks compared to all Iowa communities and communities of similar size to Ogden. Crude rates tell you the raw, un-adjusted percent of the population experiencing the health measure. Age-adjusted rates account for the age distribution present in your community and presents what the rate would be if your community had a standard age distribution. Crude rates can provide a general comparison between communities and age-adjusted rates can give a fairer comparison between communities with different age structures.

Strengths

Take a look at the top strengths of your community! Below are unadjusted and age-adjusted health measures that represent your community's strengths. We recommend using continued investment in these areas to maintain them as strengths, as well as building on them to improve in other health domains.

Crude			Age-Adjusted		
Health Domain	Statewide Community Rank	Small Community Rank	Health Domain	Statewide Community Rank	Small Community Rank
Core preventive services for older men	80th	9th	Core preventive services for older men	75th	10th

Opportunities

Below are health measures that represent potential areas for growth in your community. We recommend increasing investment in these areas to support community health and well-being.

Crude			Age-Adjusted		
Health Domain	Statewide Community Rank	Small Community Rank	Health Domain	Statewide Community Rank	Small Community Rank

How to Use this Report

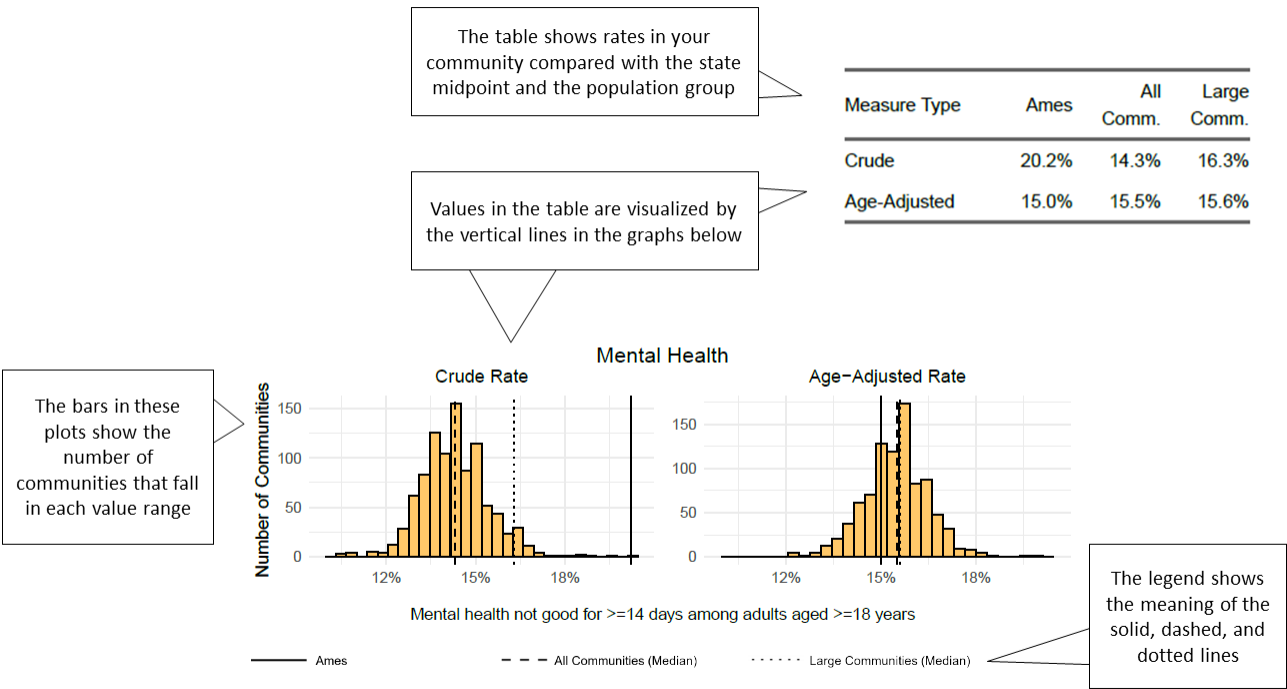

The purpose of the Iowa Community Health Snapshot Series is to provide an overview of health in Ogden that can be used to help inform health-related interventions and programming. This report contains five sections, including the overall health status of Ogden, a review of risky behaviors in the community, and information on various health outcomes, prevention measures, and disability needs. Each section includes an overview of the health domain, a breakdown of its underlying health measures, and data to see how Ogden compares to the rest of the state and similarly-sized communities.

With a population of 1,878, Ogden's similarly sized communities are defined as small communities. In Iowa, small communities have an average population of 1,553, and there are 138 communities that are considered small communities. To see all of the communities in this population group, please see Appendix 3 of this report.

Group	Population Range	Number of Communities
Large	50,000+	11
Mid-Large	10,000-49,999	31
Midsized	2,500-9,999	102
Small	1,000-2,499	138
Very Small	0-999	676
Total		958

Using Ames, IA as an Example

The graphic below is an example of the details included for each health measure. The table in the upper right shows your community’s crude and age-adjusted rate estimates alongside their averages across all Iowa communities and similarly-sized communities. The images below show the distribution of the health measure across communities. The vertical lines correspond with the values in the table to show the estimate for the specific community compared to communities across the state. The solid black line in each plot represents the community rate, with the dashed lines indicating the average rate for all Iowa communities and the dotted lines showing the average rate for similarly-sized communities.

The example graphic above displays the poor mental health rate in Ames, Iowa. The left plot shows the crude rate of poor mental health in the community. Crude rates are the raw, un-adjusted percent of the population experiencing the health measure. Notice how the solid black line is closer to the right of the plot than the dashed and dotted lines; this indicates that Ames has a higher crude rate of poor mental health than most communities in the state. However, the age-adjusted rate plot on the right shows the solid line closer to the peak of the distribution and averages for the state and similarly-sized communities, indicating that when accounting for Ames’s unique age distribution, Ames’s poor mental health rate is not a significant outlier, and is estimated to be lower than the statewide average. Accounting for crude and age-adjusted rates is critical to help inform health interventions as age-adjusted rates can help contextualize the health measure within the population.

Health Status

This section reflects measures for overall health, including general, physical, and mental health. These measures are a valuable way to see a simple summary of the health of a country’s population. The questions to calculate these measures ask respondents to evaluate their health status. General health is evaluated on a 5-point scale where respondents can report their health status as one of “excellent,” “very good,” “good,” “fair,” or “poor,” from which the respondents who answer “fair” or “poor” are included in the measure. Physical and mental health are evaluated as the rate of respondents who say they have had 14 or more days in the last 30 days in which their physical or mental health was not good. The URL below includes more information about each variable.

Poor General Health

Ogden has a crude rate of 13.2% for fair or poor self-rated health status among adults aged ≥ 18 years, which ranks 292nd out of 958 Iowa communities (49th out of 138 small communities). The age-adjusted rate for Ogden is 11.7%, which ranks 215th out of 905 Iowa communities (41st out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	13.2%	14.3%	14.0%
Age-Adjusted	11.7%	12.7%	12.4%

Poor Physical Health

Ogden has a crude rate of 10.3% for physical health not good for ≥ 14 days among adults aged ≥ 18 years, which ranks 323rd out of 958 Iowa communities (54th out of 138 small communities). The age-adjusted rate for Ogden is 9.3%, which ranks 265th out of 905 Iowa communities (49th out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	10.3%	10.8%	10.6%
Age-Adjusted	9.3%	9.7%	9.6%

Poor Mental Health

Ogden has a crude rate of 14.0% for mental health not good for ≥ 14 days among adults aged ≥ 18 years, which ranks 356th out of 958 Iowa communities (63rd out of 138 small communities). The age-adjusted rate for Ogden is 15.4%, which ranks 370th out of 905 Iowa communities (60th out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	14.0%	14.3%	14.1%
Age-Adjusted	15.4%	15.5%	15.6%

Health Risk Behaviors

Health risk measures are measures of individual behaviors that can lead to poor health outcomes. These include binge drinking, current smoking, physical inactivity, and getting less than seven hours of nightly sleep. Risk behaviors are the most critical intervention points as they can help save lives and drastically improve health outcomes later in life. Each measure is calculated as the rate of respondents participating in a high level of risk behavior. The exact cutoff points for the behavior depend on the health area. The link below includes more information about each variable.

<https://www.cdc.gov/places/measure-definitions/unhealthy-behaviors/index.html>

Binge Drinking

Ogden has a crude rate of 19.5% for binge drinking among adults aged ≥ 18 years, which ranks 476th out of 958 Iowa communities (75th out of 138 small communities). The age-adjusted rate for Ogden is 22.4%, which ranks 585th out of 905 Iowa communities (85th out of 138 small communities).

Current Smoking

Ogden has a crude rate of 16.0% for current smoking among adults aged >=18 years, which ranks 305th out of 958 Iowa communities (66th out of 138 small communities). The age-adjusted rate for Ogden is 16.5%, which ranks 241st out of 905 Iowa communities (49th out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	16.0%	16.8%	16.1%
Age-Adjusted	16.5%	17.5%	17.2%

Physical Inactivity

Ogden has a crude rate of 24.5% for no leisure-time physical activity among adults aged >=18 years, which ranks 292nd out of 958 Iowa communities (46th out of 138 small communities). The age-adjusted rate for Ogden is 22.6%, which ranks 241st out of 905 Iowa communities (50th out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	24.5%	26.1%	25.8%
Age-Adjusted	22.6%	24.3%	23.9%

Sleep <7 hours

Ogden has a crude rate of 29.4% for sleeping less than 7 hours among adults aged ≥ 18 years, which ranks 278th out of 958 Iowa communities (54th out of 138 small communities). The age-adjusted rate for Ogden is 30.1%, which ranks 207th out of 905 Iowa communities (40th out of 138 small communities).

Measure Type	Ogden	All Comm.	Small Comm.
Crude	29.4%	30.2%	29.9%
Age-Adjusted	30.1%	31.1%	31.0%

Health Outcomes

This section includes measures about specific health outcomes such as chronic illness, mental health conditions, and risk factors for future disease. Health outcome measures include but are not limited to arthritis, high blood pressure, cancer, depression, and obesity. Each measure is the percentage of respondents reporting receiving the diagnosis by a doctor, nurse, or other health professional. The link below includes more information about each variable.

Prevention

Preventive measures are another practical intervention point for public health professionals as they allow for the early detection of health conditions and improve overall treatment efficacy. This section includes a review of your community’s prevention measures, including preventive screenings and doctor visits. Besides the measure for lack of health insurance, all measures in this section are positive, where a higher rate is a strength for your community. The link below includes more information about each variable.

Appendix 1: CDC PLACES Data

This report uses a novel dataset from the Centers for Disease Control and Prevention (CDC) called PLACES: Local Data for Better Health. The PLACES dataset uses small area estimation methods to provide estimates of health measures for counties, places, census tracts, and zip code tabulation areas. The estimates are created with a multilevel statistical modeling framework that utilizes CDC's Behavioral Risk Factor Surveillance System (BRFSS), Census population counts, and American Community Survey demographic and socioeconomic data.
