Health in Jasper County: Overview

Dear Community Members & Stakeholders of Jasper County,

We are pleased to share the Iowa County Health Snapshot series, a set of reports designed in partnership with Iowa State University's Community Economic Development to assess the overall landscape of health and well-being across Iowa's 99 counties. The following pages include the health snapshot for your county. The snapshot can be used to see how Jasper County ranks across various health measures compared to the rest of the state and similarly-sized counties. This comparison allows us to identify Jasper County's strengths and opportunities for growth by leveraging data from the Centers for Disease Control and Prevention PLACES dataset.

The report includes 37 health measures organized topically by general health status, risky behavior, health outcomes, prevention, and disability. We provide a general overview of each health topic, followed by a description of each health measure. Health measure descriptions include crude and age-adjusted rates and a ranking that tells you how your county ranks compared to all Iowa counties and counties of similar size to Jasper County. Crude rates tell you the raw, un-adjusted percent of the population experiencing the health measure. Age-adjusted rates account for the age distribution present in your county and presents what the rate would be if your county had a standard age distribution. Crude rates can provide a general comparison between counties and age-adjusted rates can give a fairer comparison between counties with different age structures.

Strengths

Take a look at the top strengths of your county! Below are unadjusted and age-adjusted health measures that represent your county's strengths. We recommend using continued investment in these areas to maintain them as strengths, as well as building on them to improve in other health domains.

Crude			Age-Adjusted		
Health Domain	Statewide County Rank	Metropolitan Non-Core County Rank	Health Domain	Statewide County Rank	Metropolitan Non-Core County Rank
Current Asthma	4th	2nd	Current Asthma	4th	2nd

Opportunities

Below are health measures that represent potential areas for growth in your county. We recommend increasing investment in these areas to support community health and well-being.

Crude			Age-Adjusted

How to Use this Report

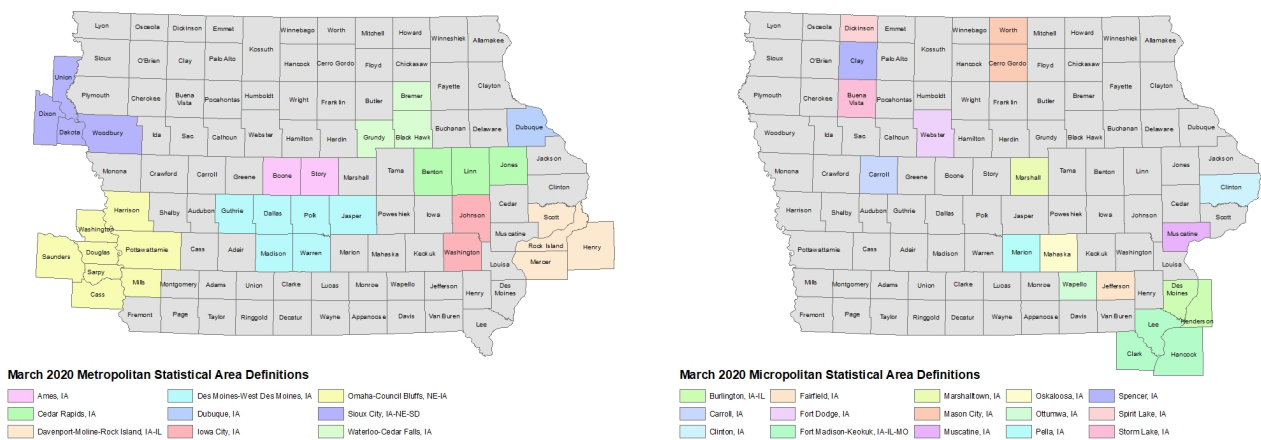

The purpose of the Iowa County Health Snapshot Series is to provide an overview of health in Jasper County that can be used to help inform health-related interventions and programming. This report contains five sections, including the overall health status of Jasper County, a review of risky behaviors in the county, and information on various health outcomes, prevention measures, and disability needs. Each section includes an overview of the health domain, a breakdown of its underlying health measures, and data to see how Jasper County compares to the rest of the state and similarly-sized counties.

With a population of 37,764, Jasper County’s similarly sized counties are defined as metropolitan non-core counties. In Iowa, metropolitan non-core counties have an average population of 29,821, and there are 12 counties that are considered metropolitan non-core counties. To learn more about the county population classifications used in this report, please see the information below the table as well as Appendix 3.

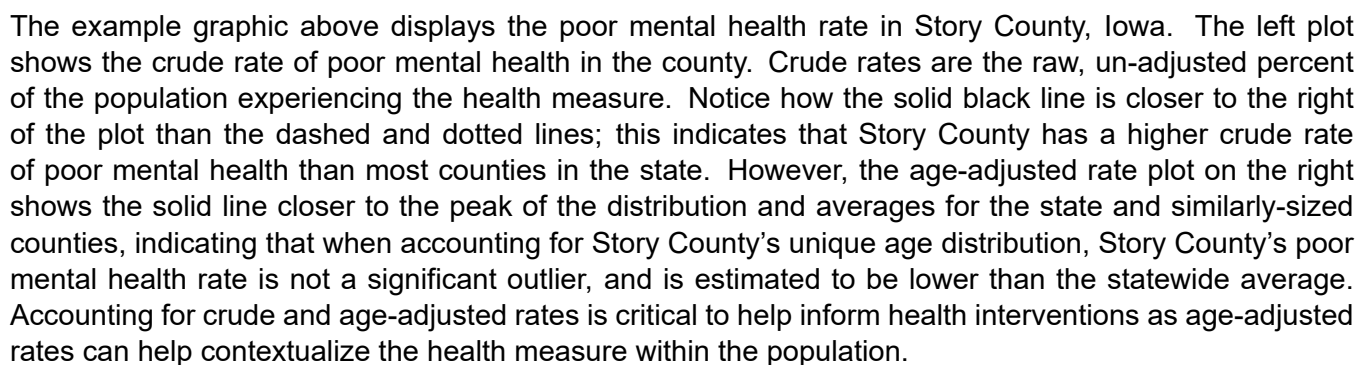

Group	Population Avg.	Number of Counties
Metropolitan Core	175,797	9
Micropolitan	30,839	15
Metropolitan Non-Core	29,821	12
Rural	12,547	63
Total		99

The counties included in each category above are determined by the United States Office of Management and Budget. Iowa has counties in nine metropolitan statistical areas and 15 micropolitan statistical areas. The counties identified as metropolitan and micropolitan can be found in the link and the maps below. Metropolitan core counties are those counties in metropolitan areas that have the city that defines the metropolitan area (e.g., Des Moines and Polk County for the Des Moines Metropolitan Area). Metropolitan non-core counties are those that fall within the metropolitan area, but do not have the core city of the metropolitan area (e.g., Dallas and Jasper Counties in the Des Moines Metropolitan Area).

The graphic below is an example of the details included for each health measure. The table in the upper right shows your county's crude and age-adjusted rate estimates alongside their averages across all Iowa counties and similarly-sized counties. The images below show the distribution of the health measure across counties. The vertical lines correspond with the values in the table to show the estimate for the specific county compared to counties across the state. The solid black line in each plot represents the county rate, with the dashed lines indicating the average rate for all Iowa counties and the dotted lines showing the average rate for similarly-sized counties.

Health Status

This section reflects measures for overall health, including general, physical, and mental health. These measures are a valuable way to see a simple summary of the health of a country’s population. The questions to calculate these measures ask respondents to evaluate their health status. General health is evaluated on a 5-point scale where respondents can report their health status as one of “excellent,” “very good,” “good,” “fair,” or “poor,” from which the respondents who answer “fair” or “poor” are included in the measure. Physical and mental health are evaluated as the rate of respondents who say they have had 14 or more days in the last 30 days in which their physical or mental health was not good. The URL below includes more information about each variable.

Poor General Health

Jasper County has a crude rate of 14.2% for fair or poor self-rated health status among adults aged ≥ 18 years, which ranks 28th out of 99 Iowa counties (8th out of 12 similarly-sized counties). The age-adjusted rate for Jasper County is 12.9%, which ranks 33rd out of 99 Iowa counties (9th out of 12 similarly-sized counties).

Measure Type	Jasper County	All Counties	Similarly-Sized Counties
Crude	14.2%	15.0%	13.2%
Age-Adjusted	12.9%	13.3%	11.8%

Poor Physical Health

Jasper County has a crude rate of 10.6% for physical health not good for >=14 days among adults aged >=18 years, which ranks 29th out of 99 Iowa counties (8th out of 12 similarly-sized counties). The age-adjusted rate for Jasper County is 9.6%, which ranks 29th out of 99 Iowa counties (8th out of 12 similarly-sized counties).

Measure Type	Jasper County	All Counties	Similarly-Sized Counties
Crude	10.6%	11.1%	10.3%
Age-Adjusted	9.6%	9.9%	9.1%

Poor Mental Health

Jasper County has a crude rate of 14.3% for mental health not good for >=14 days among adults aged >=18 years, which ranks 61st out of 99 Iowa counties (11th out of 12 similarly-sized counties). The age-adjusted rate for Jasper County is 15.4%, which ranks 43rd out of 99 Iowa counties (11th out of 12 similarly-sized counties).

Measure Type	Jasper County	All Counties	Similarly-Sized Counties
Crude	14.3%	14.1%	13.7%
Age-Adjusted	15.4%	15.5%	14.9%

Health Risk Behaviors

Health risk measures are measures of individual behaviors that can lead to poor health outcomes. These include binge drinking, current smoking, physical inactivity, and getting less than seven hours of nightly sleep. Risk behaviors are the most critical intervention points as they can help save lives and drastically improve health outcomes later in life. Each measure is calculated as the rate of respondents participating in a high level of risk behavior. The exact cutoff points for the behavior depend on the health area. The link below includes more information about each variable.

<https://www.cdc.gov/places/measure-definitions/unhealthy-behaviors/index.html>

Binge Drinking

Jasper County has a crude rate of 19.0% for binge drinking among adults aged ≥ 18 years, which ranks 70th out of 99 Iowa counties (4th out of 12 similarly-sized counties). The age-adjusted rate for Jasper County is 21.3%, which ranks 47th out of 99 Iowa counties (2nd out of 12 similarly-sized counties).

Measure Type	Jasper County	All Counties	Similarly-Sized Counties

Prevention

Preventive measures are another practical intervention point for public health professionals as they allow for the early detection of health conditions and improve overall treatment efficacy. This section includes a review of your county’s prevention measures, including preventive screenings and doctor visits. Besides the measure for lack of health insurance, all measures in this section are positive, where a higher rate is a strength for your county. The link below includes more information about each variable.

Appendix 1: CDC PLACES Data

This report uses a novel dataset from the Centers for Disease Control and Prevention (CDC) called PLACES: Local Data for Better Health. The PLACES dataset uses small area estimation methods to provide estimates of health measures for counties, places, census tracts, and zip code tabulation areas. The estimates are created with a multilevel statistical modeling framework that utilizes CDC's Behavioral Risk Factor Surveillance System (BRFSS), Census population counts, and American Community Survey demographic and socioeconomic data.
